Overheating is undoubtedly among the most significant issues with the XBox 360 as well as the primary reason for what is known as the red ring of death. Get this and unfortunately your gaming system is not going to operate regardless of what you intend to do with it.

The actual problem is with the main processor unit within the device. An excessive amount of heating melts the actual solder which attaches the inner parts together. This is really a common problem with the XBox 360 and several consumers experience this.

Unplug the device and also place it anywhere with very good air circulation so that it may cool off for twenty-four hours. If this does not work, you will have to consider other available choices.

The very first thing to do would be to check if your unit remains in warranty and if so, it is advisable to send it back to Microsoft to have it fixed by them. This will be free of cost. If it is not protected with the manufacturers warranty there are many options on the market. Sending it to Microsoft for a paid fix is a very costly procedure, therefore you might look at what else you can do first.

## NEWS

Microsoft might ask for around a hundred and fifty dollars should your device get the RROD, so it a good idea to be ready with a contingency plan with regard to correcting it by yourself just in case it takes place. Again, this issue affect many Xbox 360 owners.

There are a few very nice and nicely illustrated repair guides readily available for this particular system. However, don't let yourself be enticed to get a free one and do the job from that. Those could potentially cause significant complications particularly in case you are unclear about exactly what you'll be doing.

The most effective plan is to search on the web or visit a discussion board where you will find Xbox 360 end users and discover what technique they are working with to correct their own gaming systems. There will almost certainly be customers who have repaired the issue on their own since it is so widespread.

As soon as you possess the suitable technique along with guidelines follow it very carefully step by step, safe in the understanding that other people have used this to repair the same trouble with their very own system.

my xbox 360 is really making angry

1 day it just stopped working while i was playing gta 4 and turned 2 a red screen

now it keeps freezing within 1 to 2 minutes of playing and it keeps spiting out really hot

air outta it even though i have bearily played

i left it alone for 4 days after it turned red and now it doesn't work at all

what happended

Comments (27)

It's just one problem after another. As I told MLD, there's simply way more flaws than pros about the 360. How can you people say it's the better system? Denial. Utter denial. Sit back, shut your trap, and accept the facts. 9/20/09 #89 – Most Discussed (Today) #20 – Most Discussed (Today) – Gaming #61 – Top Rated (Today) – Gaming

## XBOX 360 problems!!!!!! HELP!!!!?

Wednesday, October 6th, 2010 at 3:38 pm

Comments (5)

My XBOX 360 was working fine yesterday, I was playing madden and it was all discolored and stuff. The day after it just stopped showing up on the tv, I can hear the sounds and stuff but it just doesnt show up on the tv. I put the cables in the right slots and its on the TV switch not the HDTV one, I also connected it into another tv and it still

won't show up. What happened?

i live in mass how and i sent in the xbox 360 box 2 weeks ago and it still didnt come  
how long will it take to come?

## Xbox 360 Elite – RROD Repair completion & unboxing

Wednesday, October 6th, 2010 at 7:44 am

Comments (29)

I finally got my Xbox back from repair and here is the official unboxing. Nothing much extra but a few papers and a complementary 1 month card. I believe my Elite has the new Jasper chipset but I cant really confirm for sure. Labels on the back indicate that it still uses a crap load of power but those have not been changed. The fan makes a lot more noise than it used to but I don't really care that much.
